

Pillar Style Seat Post Clamp Installation Guide

ATTENTION:

Please read all instructions before installing and using your saddle.

RAIL SADDLE INSTALLATION/USE:

1. Loosen the nut and bolt system for the clamp.
2. Slide the saddle onto the seat post.
3. Be sure to adjust the seat angle and position before tightening completely. The seat should sit level with the ground. The clamp can also be moved forward or backward on the rails to provide more or less distance from the handlebars.
4. Once the saddle is in the most favorable position, tighten the saddle clamp nuts and bolts with enough pressure to prevent movement. Sit on the saddle and shift your weight before riding to check there is no play.

**** If the saddle rail has limit markings, be sure to keep the clamp inside those limits. Failure to do so may result in broken rails. If no markings are present, only clamp on the straight portion of the rails - Do not attempt to clamp at the rail bends.**
